Fig. 3 - Stereo geometry and conventions

- (a) Two-camera rig, left camera = world frame ($R=I$, $T=0$), $X_R = R X_L + T$, epipolar line bounding the stereo search, DLT triangulation of a surface point; px in the image planes, mm in the world.
- (b) The three correspondence strategies as arrow diagrams over a frame grid.

Data / script: No data - schematic drawn to scale from the Sample 3 calibration (repro/fig3_geometry.py).
