Fig. 5 - Independent ZNSSD re-verification

- (a) Per-frame ZNSSD of the SHIPPED cumulative displacement for a healthy run (flat, low) and for a run whose warm start froze (rising past the threshold). (b) The displacement fields at the flagged frame. (c) The per-frame validity ledger the GUI reports.

Data / script: tools/matlab_parity.py P2 gate output + a deliberately frozen-seed run.
